

HangON

Your phone answers and books
the job while your hands are full.

An AI front desk for solo plumbers,
electricians and HVAC pros.

THE PROBLEM

**Mike is under a sink.
His phone rings.**

He can't answer. The caller hangs up and books the next plumber. **That job is gone.**

HOW HANGON WORKS

It handles the whole call, like a real receptionist.

01

Answers

Picks up, listens, and asks what's wrong.

02

Understands

Keeps the caller's final answer, even when they change their mind.

03

Books

Checks the real calendar and books only after the caller says yes.

04

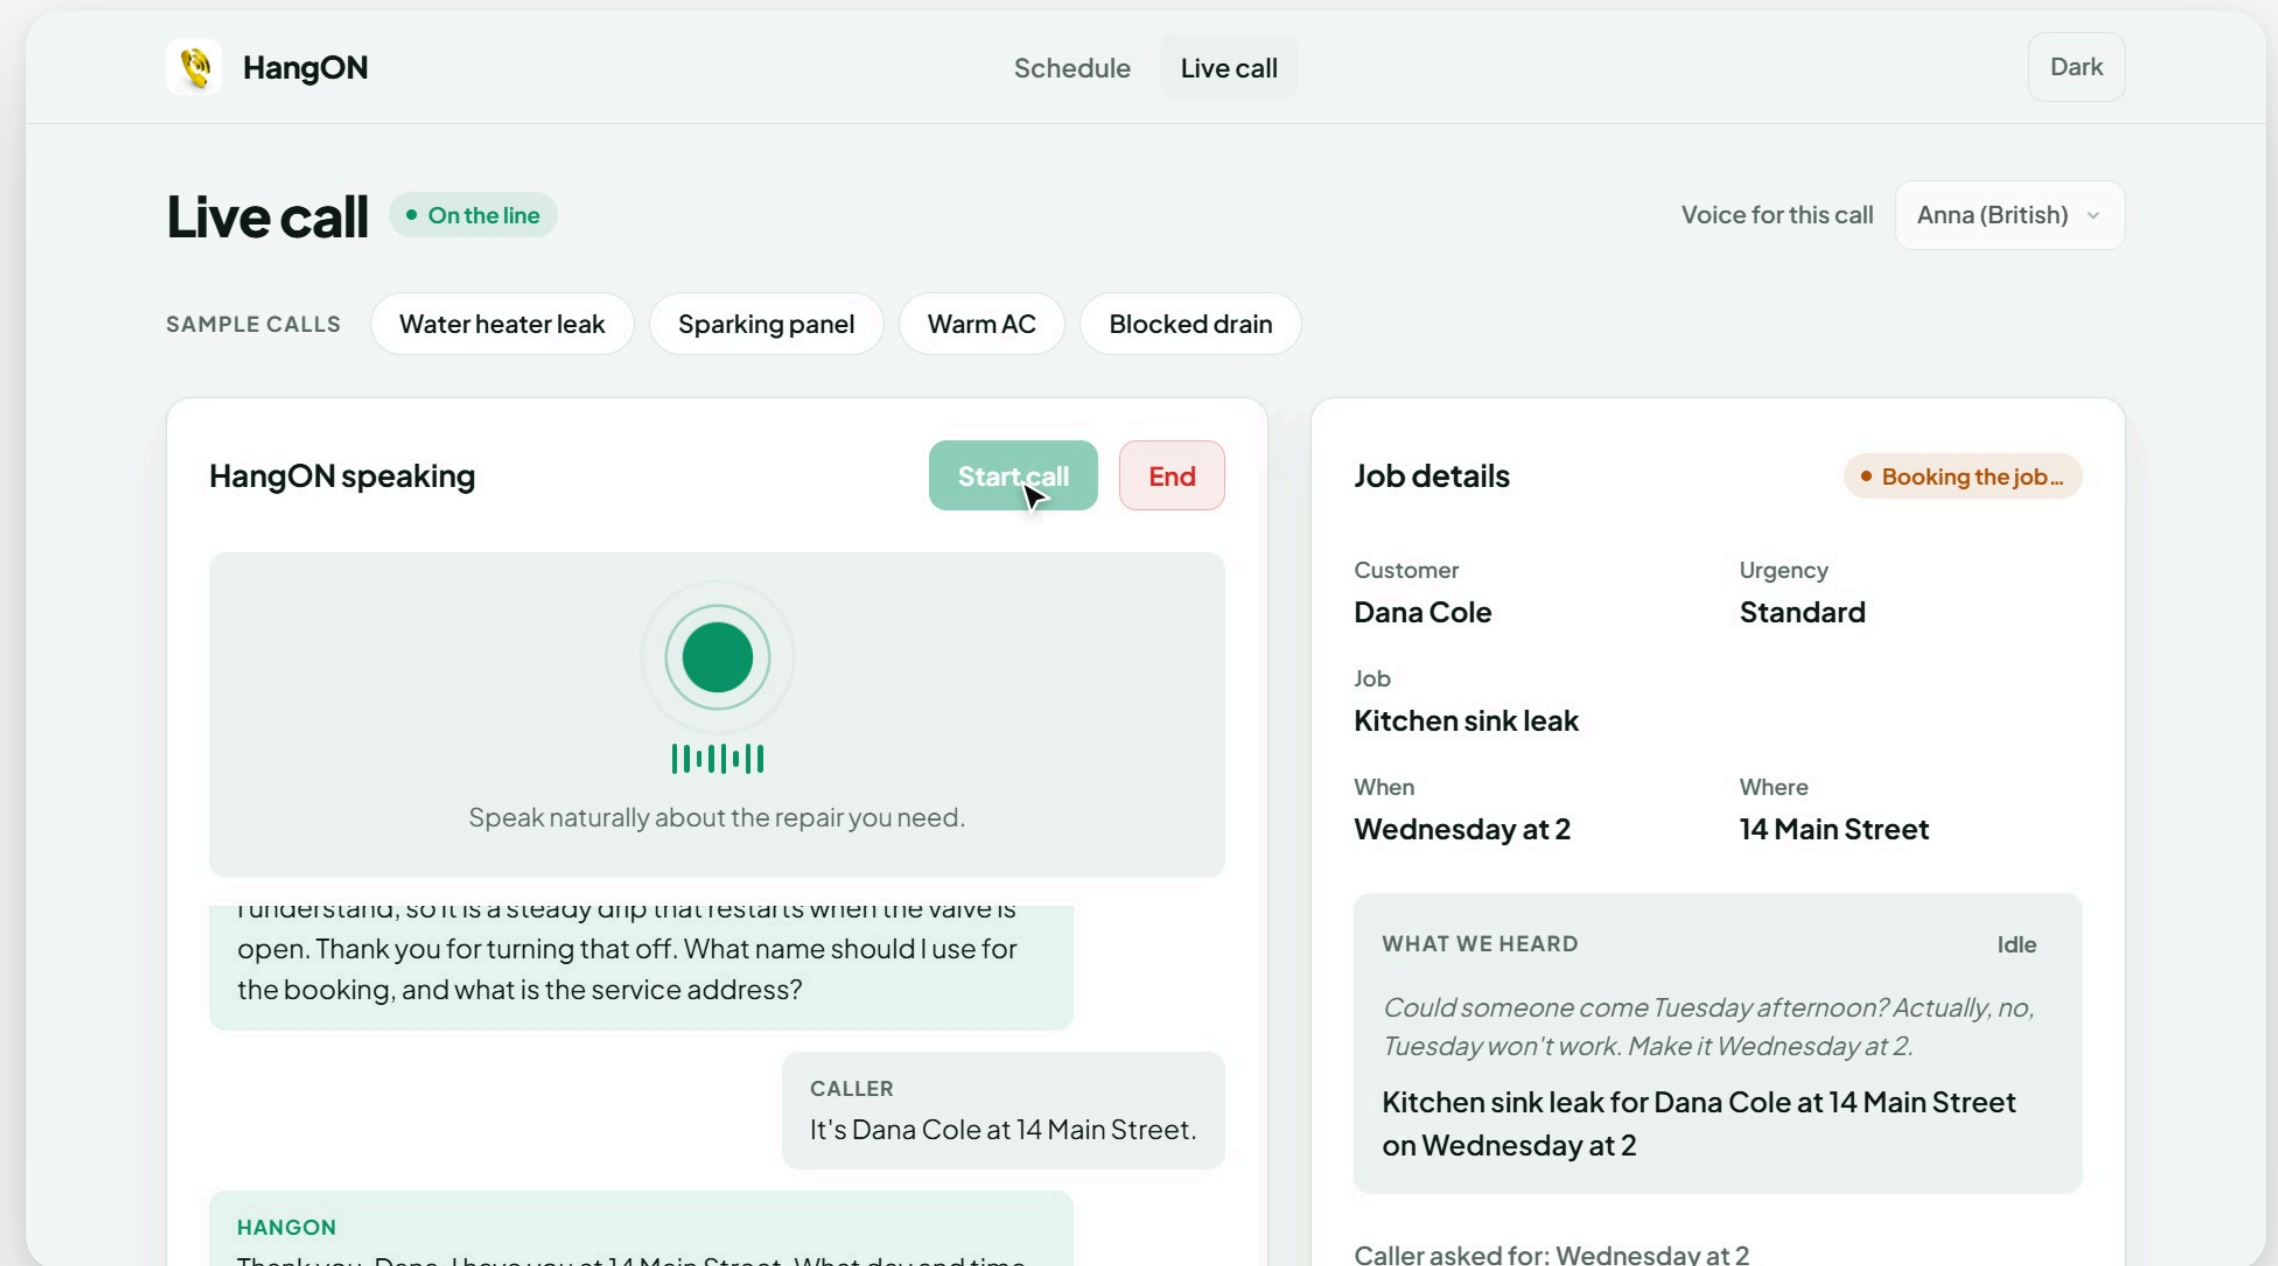

Follows up

Emails the caller and gives the technician a brief.

REAL CALL

Callers change their minds. HangON keeps up.

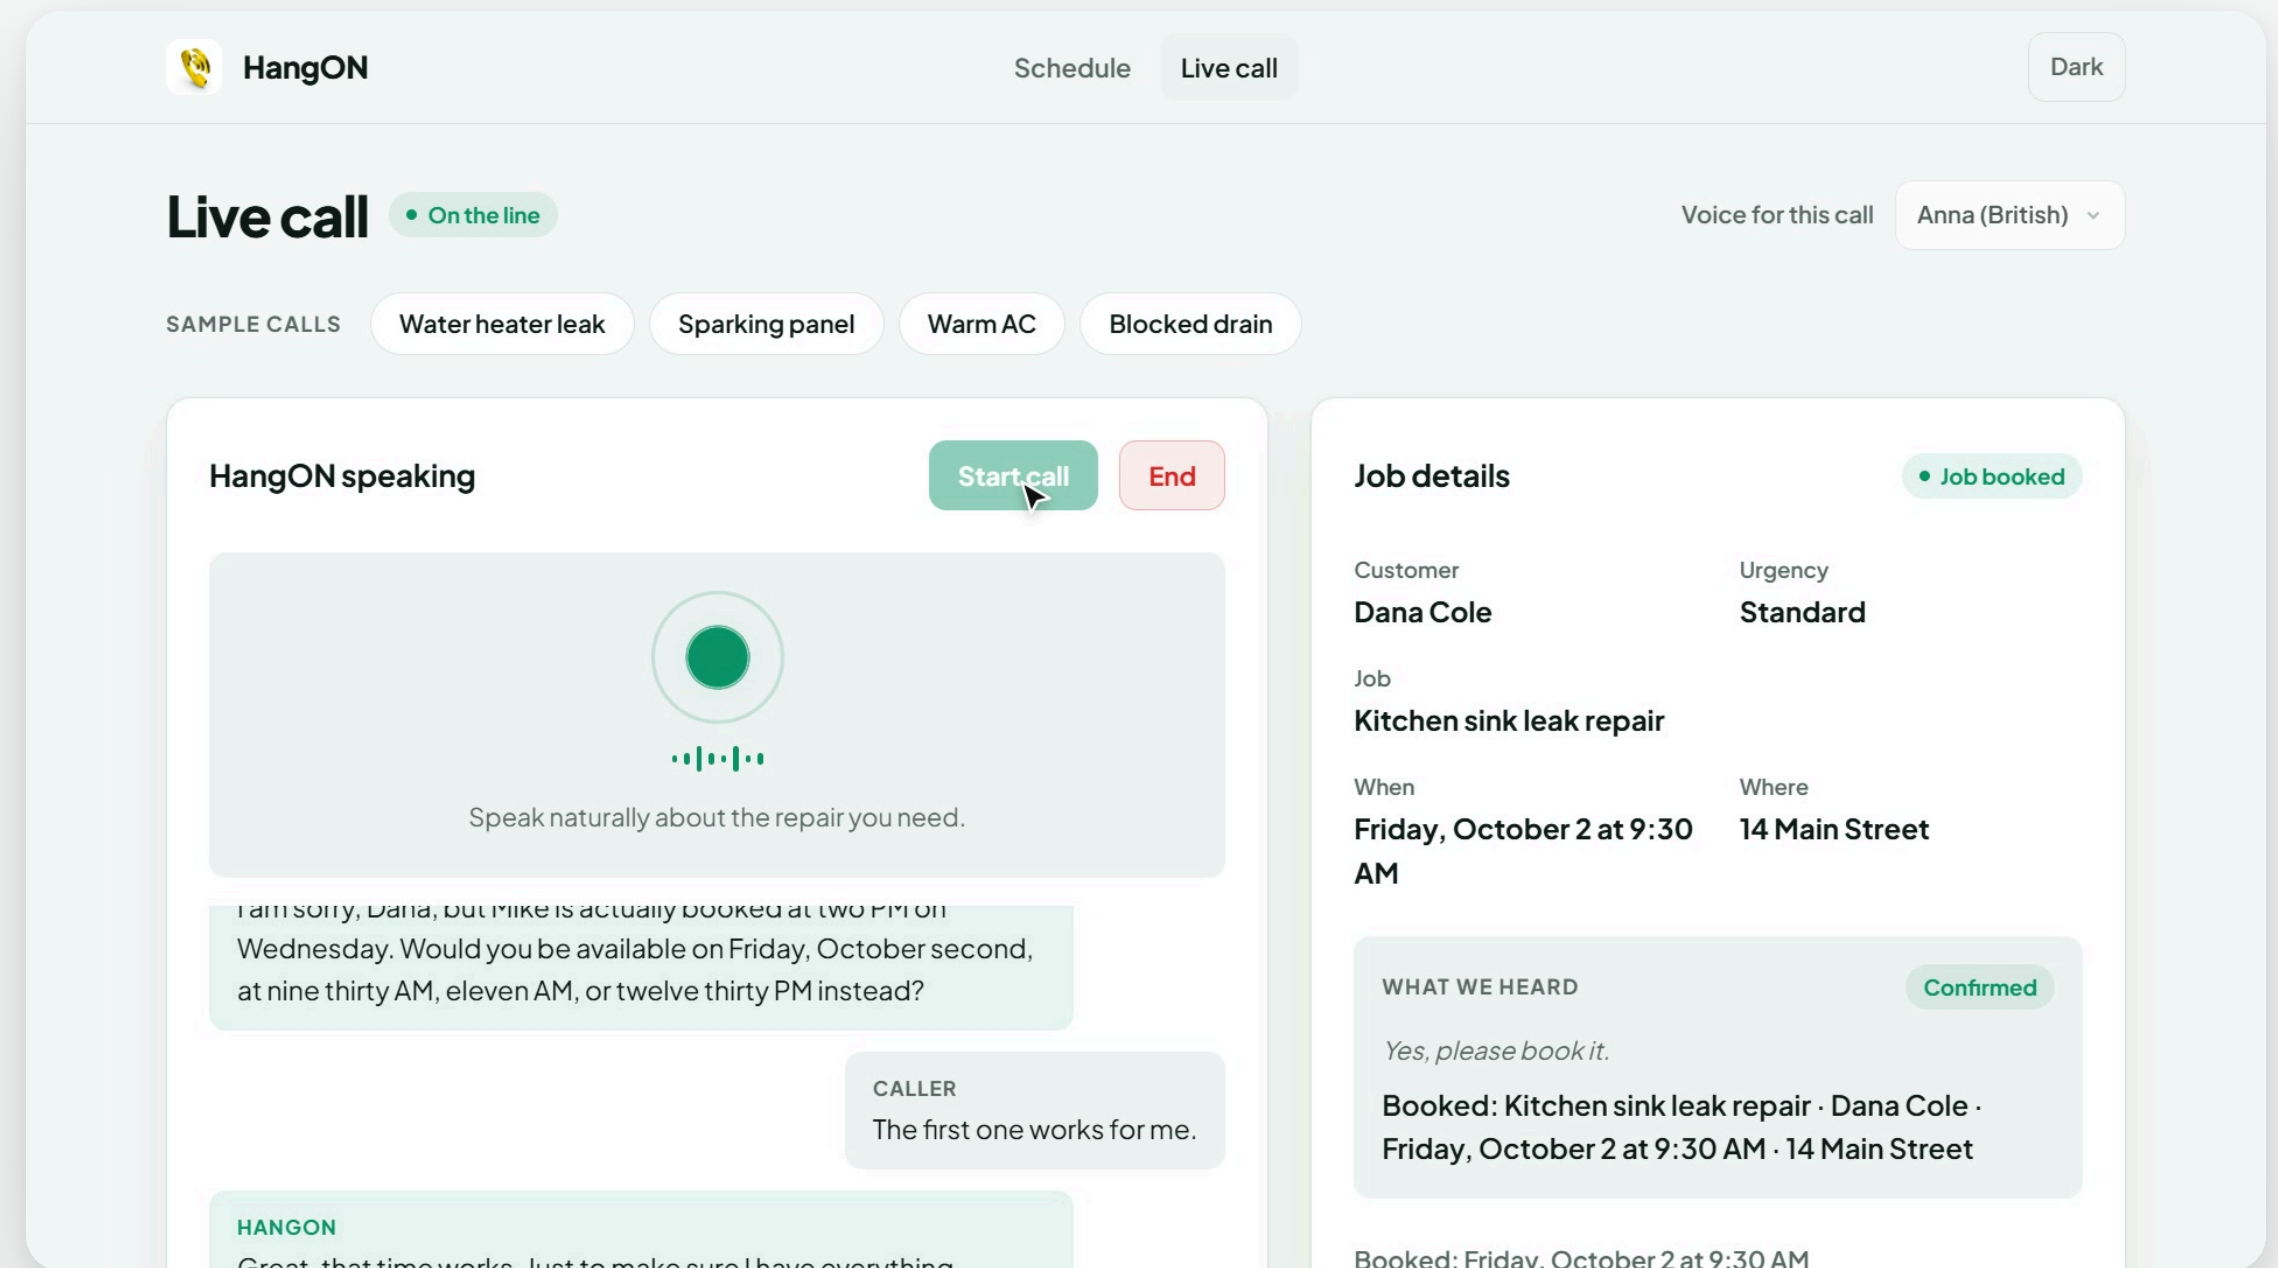

- 1 She said "Tuesday... actually, no. Wednesday at 2."
- 2 HangON filled in the job with her **final answer**: Wednesday.

REAL CALL

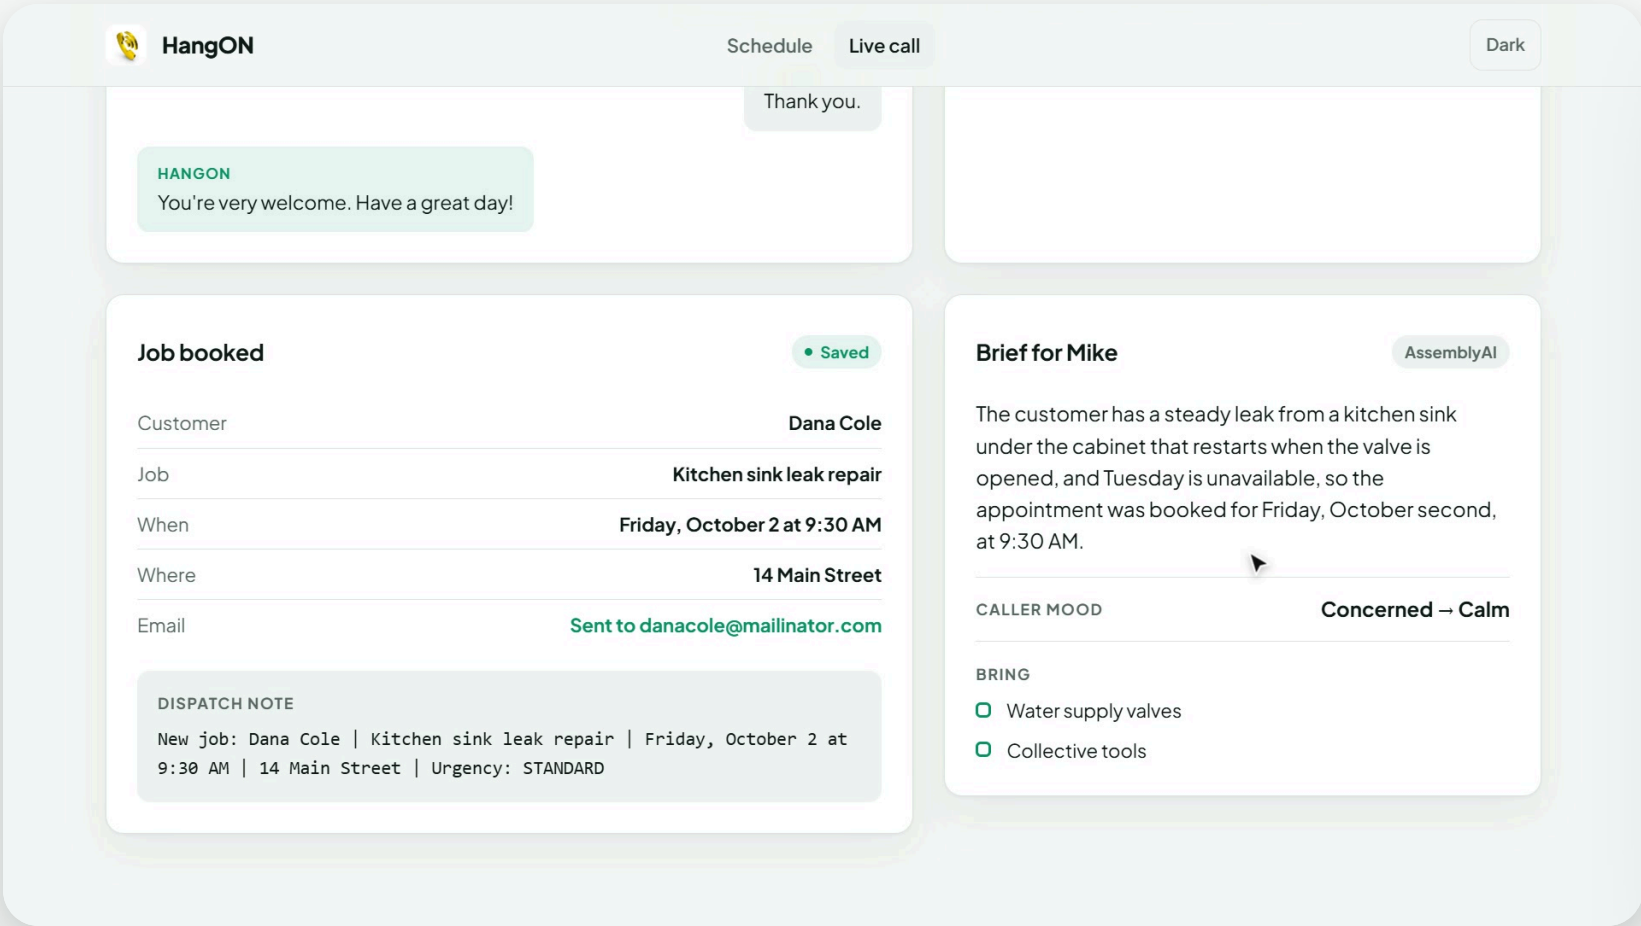

It checks the real calendar.

- 1 Wednesday at 2 was **already booked**.
- 2 It offered **real open slots**. She picked Friday at 9:30.
- 3 It read everything back and booked it **after she said yes**.

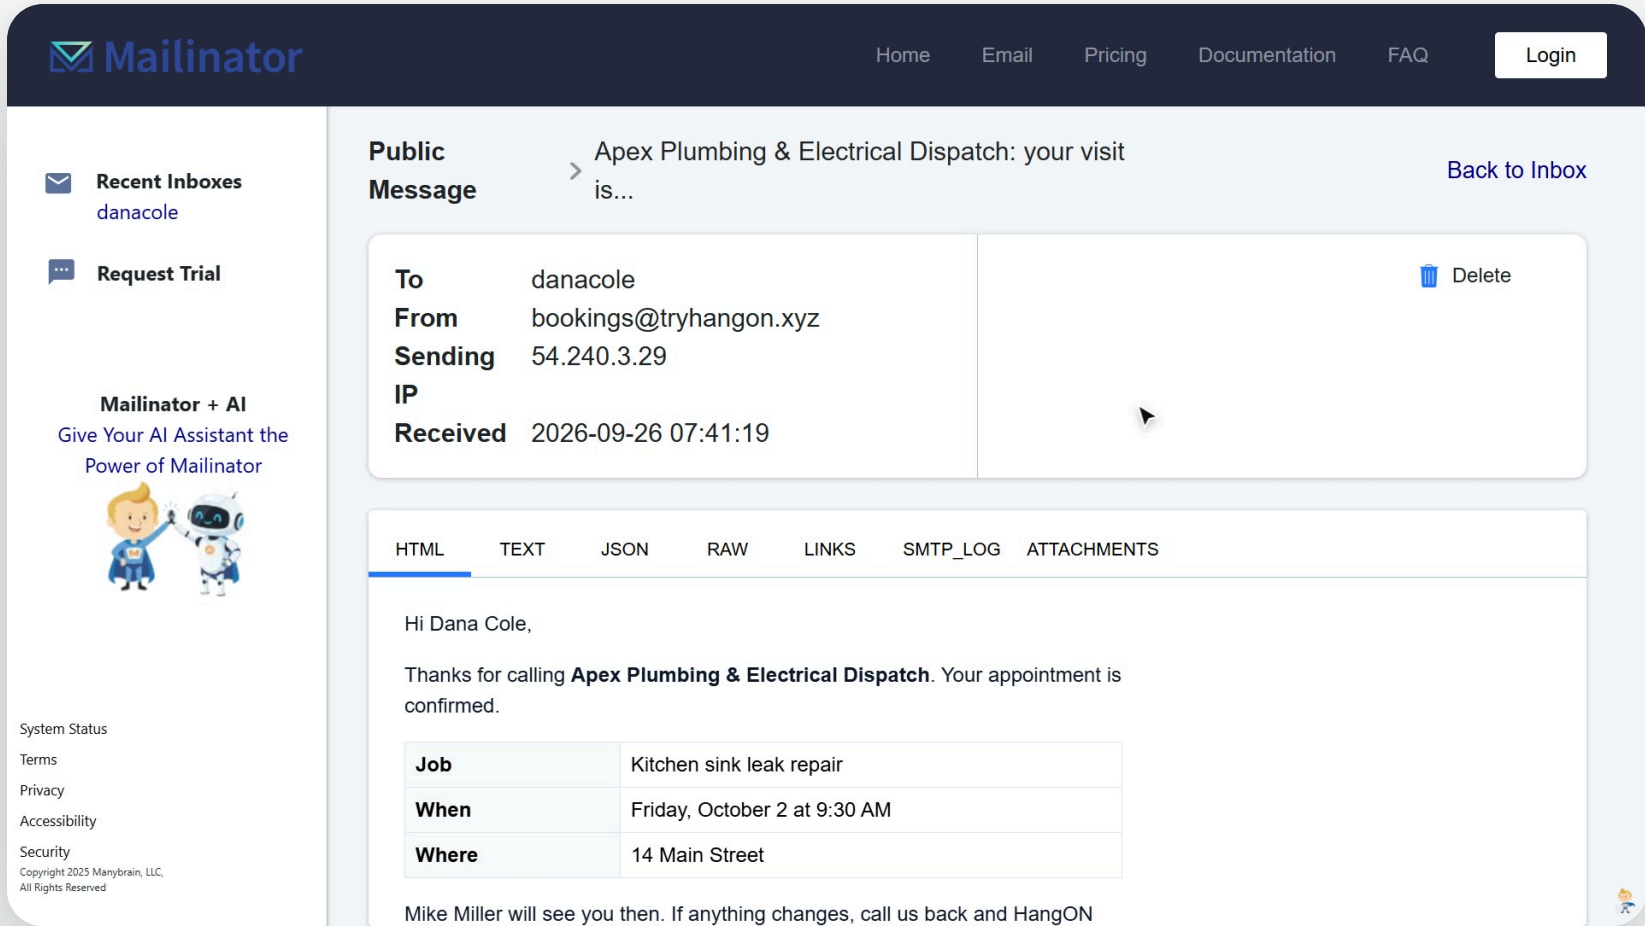

AFTER THE CALL

Booked. Emailed. Briefed.

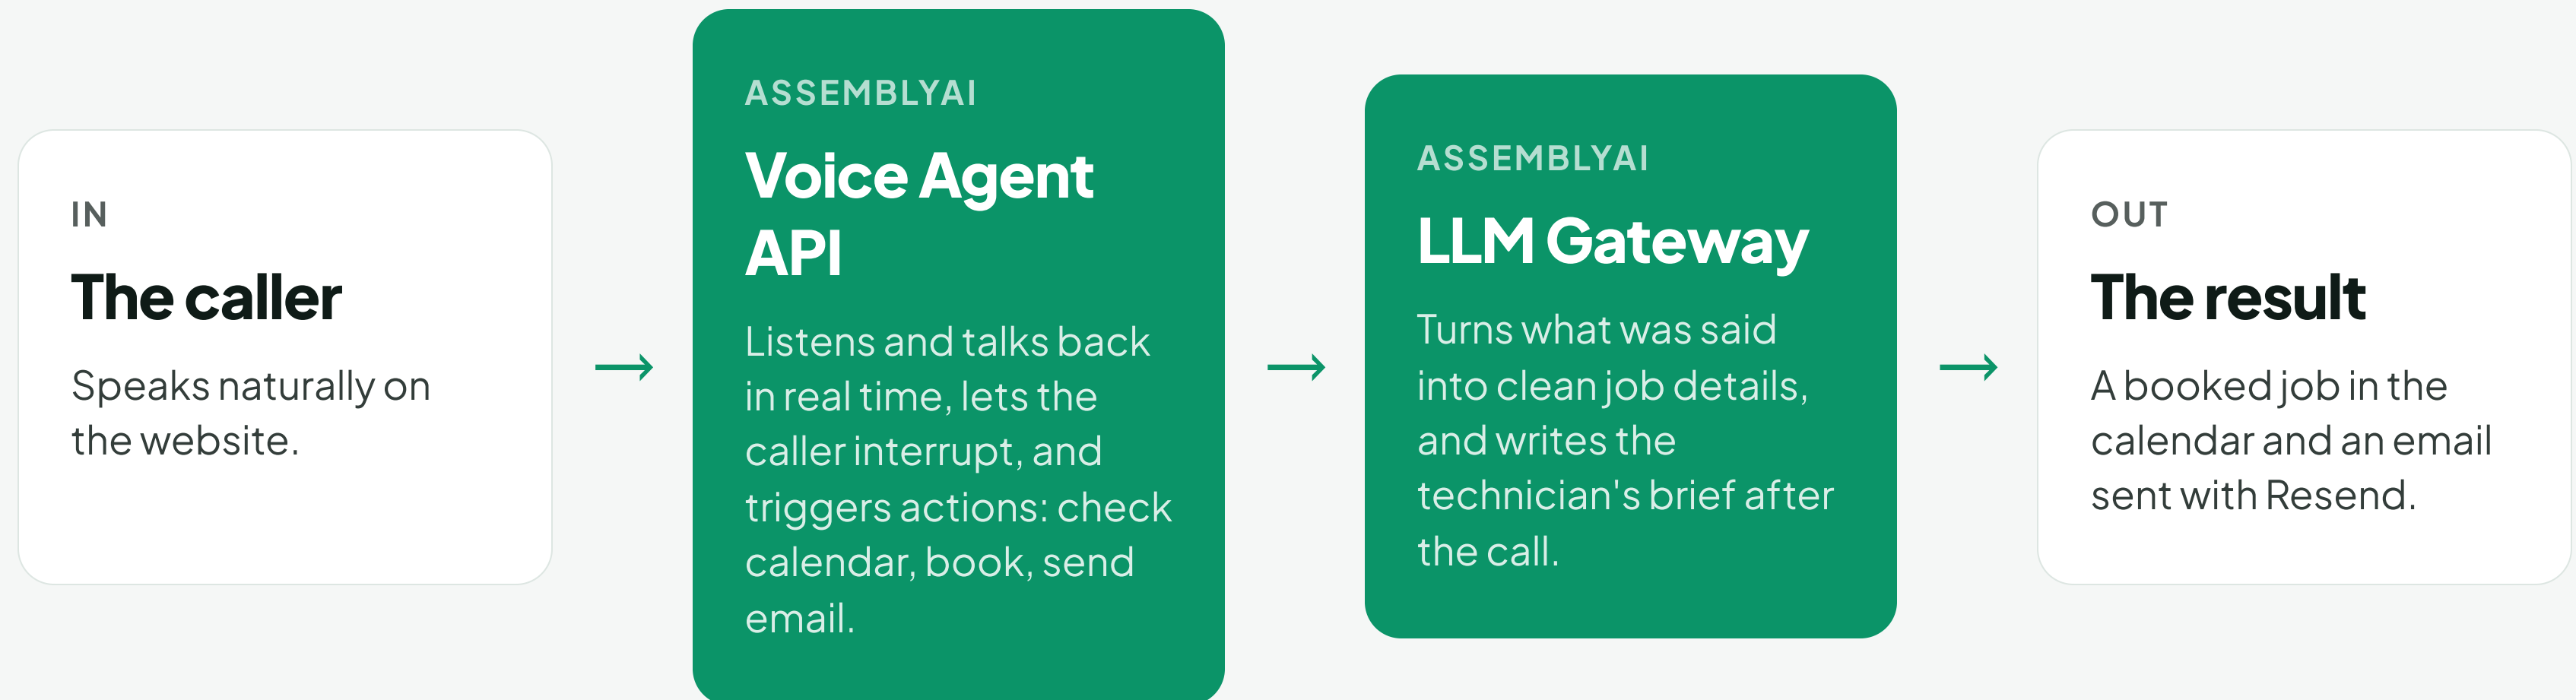

The job is on the schedule, and Mike gets a brief: what's wrong and what to bring.

The caller gets a confirmation email with the exact job, time and address.

POWERED BY ASSEMBLYAI

Two AssemblyAI products do the heavy lifting.

Never miss a job while your hands are full.
